

Highlights

- ⇒ **Power of Maximo®**, ease of use and simplicity of Field Mapplet
- ⇒ **Preconfigured Maximo for the Water and Wastewater Utilities**
- ⇒ **GIS Enabled in the Field and Office**
- ⇒ **Mobility in the core**
- ⇒ **Consolidate all workflows, e.g., Underground Service Alerts (USA) into Maximo®**
- ⇒ **Ability to create follow-up work orders in the field using your GIS assets**
- ⇒ **Use one mobile solution to access work orders and customer service requests**
- ⇒ **Improved work planning and coordination**
- ⇒ **improved work planning and coordination**

MAMS Enterprise

The Challenge

For public utilities and municipalities, expectations of quality, consistency and speediness of service are frequently taken for granted. The criticality of these infrastructures, for both horizontal and vertical assets, makes executing a reliable and easily maintained system extremely essential.

The Solution

For water and wastewater utilities and municipalities, expectations of quality, consistency and expedited level of service are frequently taken for granted. The criticality of these infrastructures, for both horizontal and vertical assets, makes executing a reliable and efficiently maintained system extremely essential.

Field Mapplet combined with Maximo®, IBM®'s leading asset management system (2017 Gartner report), provides an ideal platform to optimize your asset management practices. MAMS Enterprise is targeted for your field operations while providing advance capabilities to your engineering and asset management planning groups. It is the universal platform to implement your asset and work management needs in conjunction with your safety plans, risk mitigation, asset condition assessment, inventory management, and your contract management.

Work orders can be organized and coordinated easily and effectively. With the help of simple synchronization between the mobile and console unit, field personnel can use all data necessary for their workflows. They will benefit from the extended GIS-functionalities like the availability of navigation, optimal routing, and the accessibility of detailed information about facilities and linked documents. With a few clicks, field workers can upload their completed work order to Maximo®, which will be accessible to all involved persons permanently. MAMS Enterprise is an all-encompassing, fast, and reliable solution for your enterprise.
