

## Highlights

- ⇒ Visualize your increased productivity over time
- ⇒ See trends between different workflows
- ⇒ Reallocate your resources based on work completion
- ⇒ Access to map-based analytics
- ⇒ Calculate future time and costs demands
- ⇒ Create a setting specific to your needs
- ⇒ Hub for value-added platforms
- ⇒ Provide alerts
- ⇒ At-a-glance format delivers pertinent information effortlessly
- ⇒ Shows static and dynamic data including: process data, reports, video and live content

## A Dashboard for Displaying Critical Data

### The Challenge:

To make smart business decisions based on historical information.

### The Solution:

**Mapplet Analytic Tileboard (MAT)** is a viewing environment that displays all of your critical data in an at-a-glance format making it a valuable and user-friendly addition to the Mapplet Suite. MAT streams dynamic data to your dashboard, incorporating aggregate data, or rotating data, that changes and updates based on your settings. It allows you to easily run important reports and to gain quick-access to relevant data.

MAT goes beyond a GIS centric environment to also capture other enterprise data sets within your organization such as—plants, customer service, and laboratory systems, to name a few. Anyone within an organization can access and utilize MAT, gaining access to critical information pertinent to their work. Field work information like valve turning and plant reads can be displayed along with in-house office work such as billing and customer service complaints. Views can be configured to meet the needs of you as an individual, your group, or throughout an agency.

MAT is a web browser solution which is ideal for all operating systems including Windows 7, 8, Android, and iOS. The tile theme provides flexibility for location, size and movement of the information you need to view.

MAT aims to give a straightforward, simple-to-use dashboard display that is easily configurable and intuitive so that both technical and non-technical professionals can utilize MAT. The benefit of MAT for organizations is the ability to make optimal decisions from the use of a simple, dynamic set of data.
